

If Horses Could Talk

By: **AMANDINE COUPET**

... BE SURE TO check the riding equipment before riding us horses. Make sure the reins are in good conditions, well taken care of and strong enough. Examine the girth before riding and make sure that it is tight enough. Old, cracked & not oiled stirrup leather could get you in trouble during courses. WE HORSES want to enjoy our ride during exercise or shows safely without any accidents.

Crib-biting and windsucking

By: **Ali Tarraf**

Crib-biters or cribbers, by gripping objects with their teeth and gulping in air, can damage teeth, making it difficult to eat. Wind suckers suck in air without gripping anything; but sucking air into stomach can cause indigestion and colic. Both habits are considered an unsoundness.

Causes : Lack of exercise and boredom. Imitation. Irritation of stomach. Lack of bulk food.

Remedies: 1-Plenty of exercise
2-Constant supply of hay, or salt lick to keep horse entertained in stable.

Did You Know?

The origin of competitive show jumping is in all probability Irish. The earliest competition recorded was held at the Royal Dublin Society's Horse Show in 1865.

World Records

High Jump... 2.47 m., held by Captain Alberto Larraguibel Morales of Chile, riding Huaso on February 5th 1949.
